

## Suggestions for Authenticated guest users.

Create a web site where only selected people can login

Faculty support and maybe secretaries

Fill in an online form

Have the account created automatically along with a password, create a printable report along with terms of use

The account will expire automatically after the selected period

**Faculty members** will be able to create accounts valid for up to 7 days as shown in the picture below:

The screenshot shows a web interface for the "Automatic Wifi Accounts System". At the top, it says "Automatic Wifi Accounts System". Below that, it displays "You are logged in as: nsctest" with a "logout" link. The main instruction is "Please enter visitor's name and select period of visit:". There is a text input field for "Visitor's Name:" containing "episkeptis episkeptakos". Below this are four dropdown menus for "Day:", "Month:", "Year:", and "DATE:". The "Day:" dropdown is set to "27", "Month:" to "06", and "Year:" to "2013", resulting in a "DATE:" of "2013-06-27". A section titled "Select visit duration (up to 3 days)" contains a "Duration in days:" dropdown set to "3". At the bottom, there are two buttons: "Reset" and "Create Account".

**OTY members** will be able to create accounts valid for longer periods as shown here

**Automatic Wifi Accounts System**

You are logged in as: Savvas Nikiforou [logout](#)

Please enter visitor's name and select period of visit:

Visitor's Name:

	Day:	Month:	Year:	DATE:
From:	<input type="text" value="21"/>	<input type="text" value="06"/>	<input type="text" value="2013"/>	2013-6-21
To:	<input type="text" value="8"/>	<input type="text" value="01"/>	<input type="text" value="2014"/>	2014-01-8

*For short conferences with many visitors we can have one of three options*

- 1- Create an open SSID for the conference and keep it open only for the duration of the conference. It will only be transmitted only by the WAPs near the room(s) where the conference takes place. **(not preferred)**
- 2- Create an SSID with a simple method of authentication like PSK and let the participants know the key. It is more preferred than option #1 because only the participants of the conference will have access to it. The SSID will again be broadcasted for the conference duration.
- 3- Create an account for the conference valid only for its duration. This is the fastest cleanest solution.
